Food First Farm Planning

ASH STUDIO (UORR)

The farm is in the suburbs of Beijing covering an area of 7.6 hectare and the project is cooperated designed by ASH studio and UORR(United Office of Rural Regeneration).

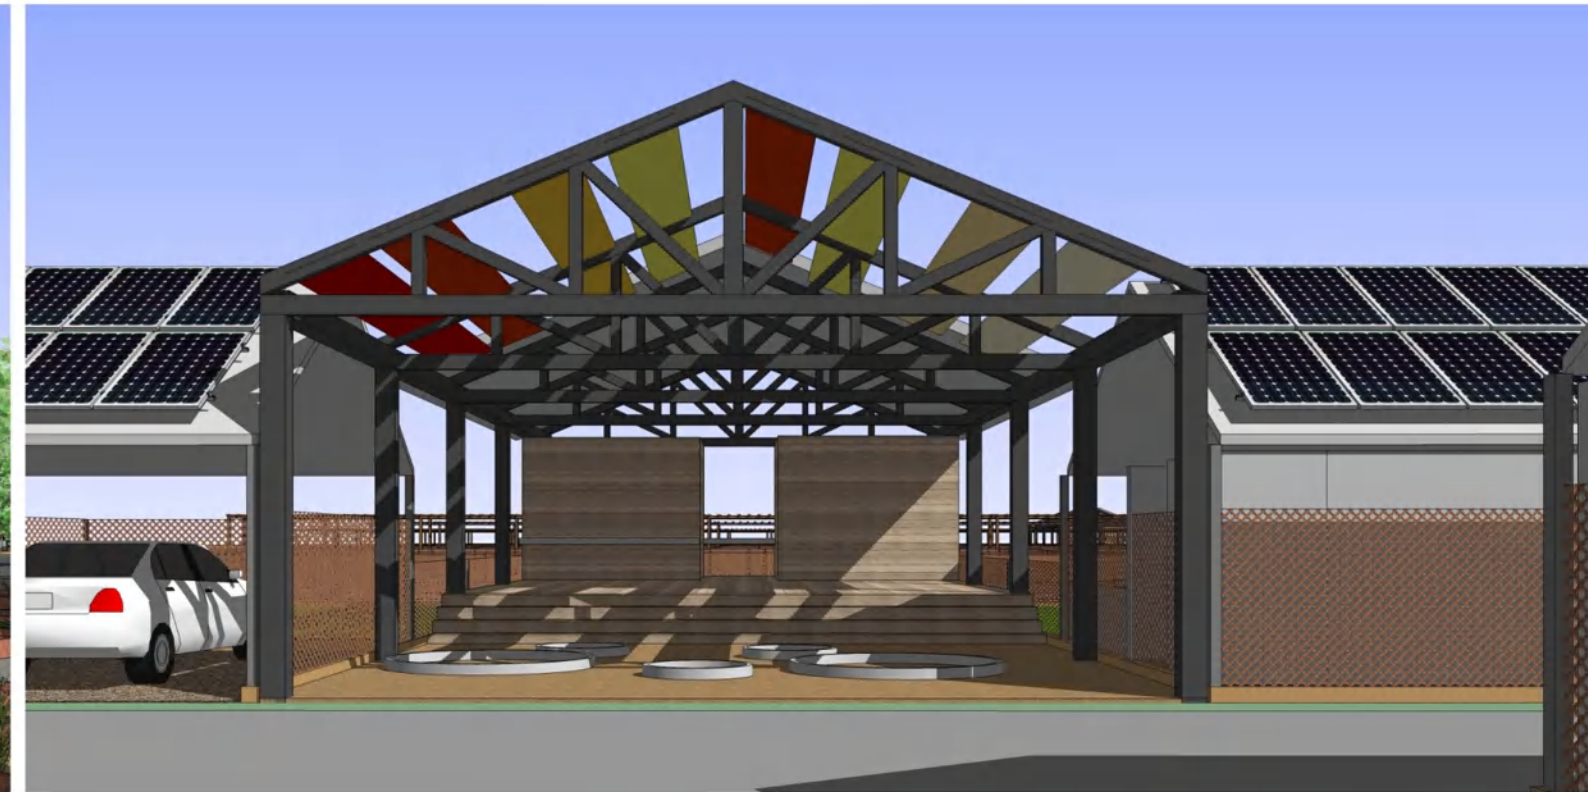

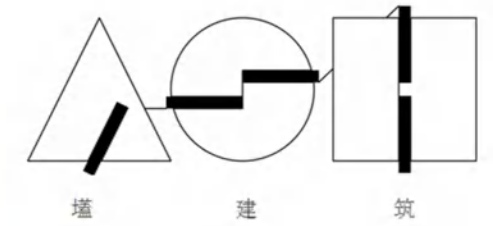

The design is based on the principle of natural agricultural planting; respects the diversity of nature and follows the material and energy cycle of planting and breeding; inherit traditional Chinese farming culture and knowledge.

The design adopts the philosophy of community support agriculture (CSA) by engaging citizens in agricultural farming to promote a healthy and natural lifestyle and rebuild the harmonious development and mutual trust between rural and urban communities. It also promotes multi-facets of public welfare such as children's nature education, green food experience and sustainable life advocacy.

Guantou 5 Houses

ASH STUDIO (UORR)

Village

Nature

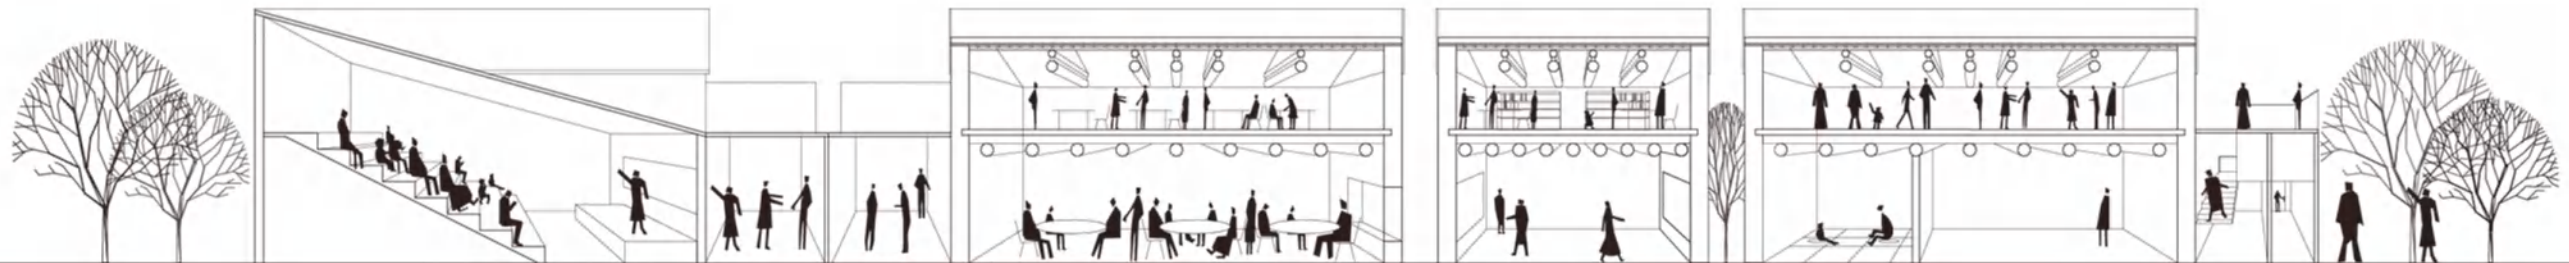

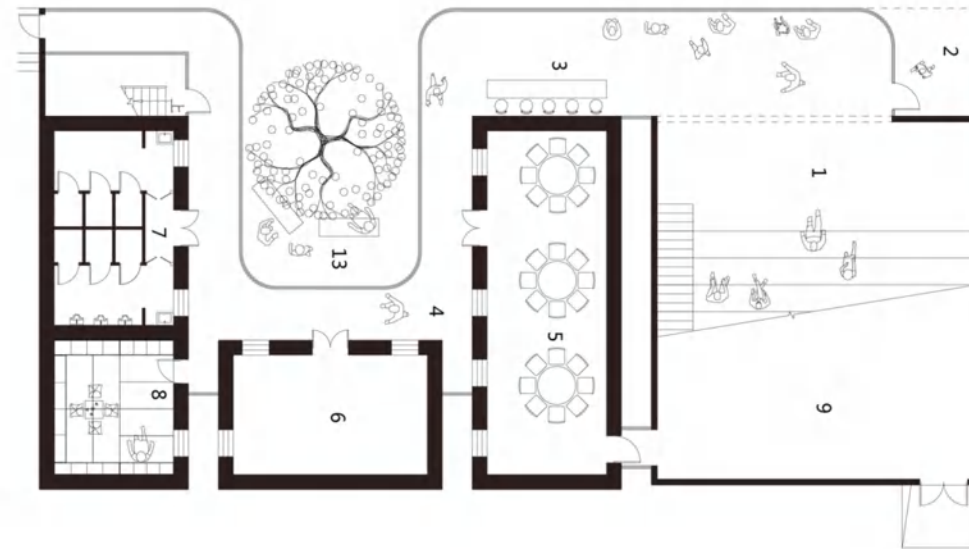

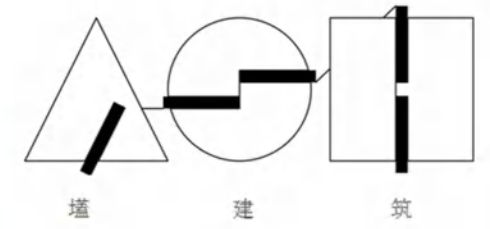

The abandoned 5 old houses in Guantou Village was once the place of origin of the village, but after the rise of the coal economy in Shanxi Province, concrete residential buildings, which represented wealthy life, were built on the west side of the village, and the original part of village now is declining and becoming more and more decadent.

This project aims to transform the five old houses located between the village and the nature into children's natural educational base with the natural resources around the village. It will embed children's activities into the space of traditional old houses and streets of the village, and the revival of the old house can prolong the intrinsic value of the nature&tradition and mediate between city and rural areas.
